Willner I, Eshhar Z; WPI; 2000-524259/47. N-PSDB; AAA74605. Apparatus for detecting small molecules, especially explosives comprises piezoelectric crystal

Disclosure, Fig 3B, 90pp, English.

The present sequence is the light chain variable region of SB3 antibody. The CDNA encoding this sequence was obtained from total RNA extracted from a SB3 Mybridoma by RT-PCR. SB3 is an iggla mithody derived from a TNP-KLH immunised mouse. Its binding to TNP or DNS antigen can be blocked by very low amounts of TNT and it can therefore be used in a method for detecting small assayed explosive molecules. Molecules are detected using a piezoelectric sensor. Piezoelectric immunassasying in liquid phase allows stationary and flow analysis of an aqueous sample. The method is sufficiently sensitive for detection of low molecular weight molecules

The growth of all solid tumours requires new blood vessel growth, angiogenesis, inhibition of which is an approach to limiting tumour growth. The invention may allow development of therapeutics with a cytostatic activity as a collagen agonist or antagonist. The invention is useful for diagnosing and treating disorders associated with angiogenesis, tumour growth and/or cancer metastasis. The present sequence of the mouse anti-cryptic collagen site antibody HUIV26 variable region light chain used during the creation of the antibody of the invention.

The bispecific antibody construct of the invention is useful for the prevention, treatment or ameliocation of a tumorous disease, such as an epithelial or minimal residual cancer. The present amino acid sequence represents an antibody light chain variable domain that is specific for human EpCAM.

The invention relates to a cytotoxically active CD3 specific binding construct comprises a first domain specifically binding to human CD3 and an Ig-derived second binding domain. The CD3 specific binding construct above or the construct produced by the process, nucleic acid molecule, vector, or host is useful for the preparation of a pharmaceutical composition for the prevention, treatment, or amelioration of a composition for the prevention, a inflammatory disease, an immunological disorder, an autoimmune disease, an infectious disease, viral disease, allergic reactions, parasitic reactions, graft-versus-host disease, or host-versus-graft disease, a tumor, an inflammatory disease, an immunological construct is useful for treating, preventing, or ameliorating proliferative disease, a tumor, an inflammatory disease, an immunological disorder, an autoimmune disease, an infectious disease, viral disease, allergic reactions, parasitic reactions, graft-versus-host disease, or host-versus-graft diseases. The present sequence represents the amino coil sequence of an anti-EpCam single chain antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New cytotoxically active CD3 specific binding construct comprises a first domain specifically binding to human CD3 and an Ig-derived second binding domain, useful for treating, preventing, or ameliorating, e.g.

the interies of transfer to a mercing of the comparing bitter domains to state the capacity of binding to a predetermined epitope when positioned C-terminal of at least one further domain in a recombinant bicostioned C-terminal of at least one further domain in a recombinant bicompulsed on the surface of a biological display system as part of a BSD displayed on the surface of a biological display system as part of a fusion protein for binding to a predetermined epitope, where the fusion protein comprises an additional domain positioned N-terminal of the BSD and an amino acid sequence that mediates anchoring of the fusion protein to the surface of the display system; and (b) identifying a BSD that binds to the predetermined epitope. The method is useful to identify bicomputed to protein antibody state capable of efficiently binding to the corresponding antibody in the protein gradies that comprise antibody successible. The polypeptides or antibodies identified by the method are useful therapeutically and diagnments that bind independently of their position within bifunctional single-chain fusion proteins can be isolated from combinatorial antibody in button method. Sequences AAY17957-965 represent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Phage display system for identification of binding site domains retaining capacity to bind an epitope.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Binding site domain; BSD; epitope; fusion protein; therapeutic; cancer; autoimmune disease; scFv-antibody; single-chain Fv; mouse.

Anti-CD3-anti-EpCAM bispecific single chain antibody - SEQ ID 60.

24-FEB-2005 (first entry)

```
The invention relates to a cytotoxically active CD3 specific binding construct comprises a first domain specifically binding to human CD3 and an Ig-derived second binding domain. The CD3 specific binding construct above or the construct produced by the process, nucleic acid molecule, vector, or host is useful for the preparation of a pharmaceutical composition for the prevention, treatment, or amelioration of a nucleic acid molecule, composition for the prevention, treatment, or amelioration of a disorder, an autonimmune disease, an infectious disease, wiral disease, allergic reactions, parasitic reactions, graft-versus-host disease, or host-versus-graft disease. The cytoxically active CD3 specific binding construct is useful for treating, preventing, or ameliorating construct disease, a tumor, an inflammatory disease, an immunological disorder, an autonimmune disease, an inflammatory disease, viral disease, callergic reactions, parasitic reactions, graft-versus-host diseases, or host-versus-graft diseases. The present sequence represents the amino acid sequence of a CD3 specific binding construct.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New cytotoxically active CD3 specific binding construct comprises a first domain specifically binding to human CD3 and an Ig-derived second binding domain, useful for treating, preventing, or ameliorating, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            4 DIVMTQSPSSLSVSAGEKVTMSCKSSQSLLNSRNQKNYLAWYQQKPGQPPKLLIYGVFIR 63

```
The invention comprises a composition that contains a bispecific single chain antibody consisting of at least two domains, where one of domains binds to human epithelial cell adhesion molecule (EpCAM) antigen, and the second domain binds to human OD3 antigen. The bispecific antibody construct of the invention is useful for the prevention, treatment or amelioration of a tumorous disease, such as an epithelial or minimal residual cancer. The present amino acid sequence represents a bispecific single chain antibody of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              441

                                                                                                                                                                                                                                                                                                                             셤
                                                                                                                                                                                                                                                                                                                                                              ô
                                                                                                                                                                                                                     The invention comprises a composition that contains a bispecific single chain antibody consisting of at least two domains, where one of domains binds to human epithelial cell adhesion molecule (EpCAM) antigen, and the second domain binds to human CD3 antigen. The bispecific antibody construct of the invention is useful for the prevention, treatment or amelioration of a tumorous disease, such as an epithelial or minimal residual cancer. The present amino acid sequence represents a bispecific single chain antibody of the invention.

The invention comprises a composition that contains a bispecific single chain antibody consisting of at least two domains, where one of domains binds to human epithelial cell adhesion wolecule (EpcAM) antigon, and the second domain binds to human CD3 antigen. The bispecific antibody construct of the invention is useful for the prevention, treatment or amelioration of a tumorous disease, such as an epithelial or minimal residual cancer. The present amino acid sequence represents a bispecific single chain antibody of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New cytotoxically active CD3 specific binding construct comprises a first domain specifically binding to human CD3 and an Ig-derived second binding domain, useful for treating, preventing, or ameliorating, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           444
New pharmaceutical composition having a bispecific single chain antibody construct, useful for preventing, treating or ameliorating a tumorous disease, such as an epithelial or minimal residual cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            63

```

```
The invention relates to a cytotoxically active CD3 specific binding construct comprises a first domain specifically binding to human CD3 and an Ig-derived second binding domain. The CD3 specific binding construct above or the construct produced by the process, nucleic acid molecule, vector, or host is useful for the preparation of a pharmaceutical proliferative disease, a tumor, an inflammatory disease, an immunological disorder, an autoimmune disease, an infectious disease, an immunological allergic reactions, parasitic reactions, parasitic reactions, parasitic reactions, parasitic reactions, construct is useful for treating, preventing, or ameliorating
                                                                                                                                                                                                                                                                                                                                     proliferative disease, a tumor, an inflammatory disease, an immunological disorder, an autoimmune disease, an infectious disease, viral disease, allergic reactions, parasitic reactions, graft-versus-host diseases, or host-versus-graft diseases. The present sequence represents the amino acid sequence of deimmunized construct 4-lxanti-CD3.

WPI; 2005-021271/02. N-PSDB; ADV66115. New pharmaceutical composition having a bispecific single chain antibody construct, useful for preventing, treating or ameliorating a tumorous disease, such as an epithelial or minimal residual cancer.

Claim 12; SEQ ID NO 39; 227pp; English.

The invention comprises a composition that contains a bispecific single chain antibody consisting of at least two domains, where one of domains binds to human epithelial cell adhesion molecule (EpCAM) antigen, and the

A neutrophil-priming dose of SAF-1 agonist antibody or a pharmaceutical composition comprising the antibody is useful for treating or preventing an infectious disease state such as osteomyelitis, deep seated wound infections, sepsis, antibiotic resistent bacterial infection, viral infections and those involving intracellular pathogens and parasites such as Listeria monocytogenes, Salmonella and leishmania in amammal. Nucleic acid sequences encoding the variable light chain and heavy chain peptide sequences are useful for mutagenic introduction of specific changes within the nucleic acid sequences encoding the (complementarity determining regions) CDRs or framework regions, and for incorporation of the resulting modified or fusion nucleic acid sequence into a plasmid for expression. The CDR-encoding regions comprising silent mutations are used in construction of humanized
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sialoadhesin factor-1; SAF-1; anti-SAF-1 monoclonal antibody; 13G3; 11G4; osteomyelitis; wound infection; sepsis; Listeria monocytogene; Salmonella; Leishmania; kappa chain variable region; mouse.
second domain binds to human CD3 antigen. The bispecific antibody construct of the invention is useful for the prevention, treatment or amelioration of a tumorous disease, such as an epithelial or minimal residual cancer. The present amino acid sequence represents a bispecific single chain antibody of the invention.
                                                                                                                                                                                                                                                63

WCPC [1gA Fab McD603-hosphocholine complex] (AAR38602-03 and AAR38602.03 and AAR38602.03 and AAR38609-10, respectively), NEWM [Ig Fab' NEW] (IAR38604-05 and AAR38612, respectively) and KOL [IgG1 KOL] (AAR38606-07 and AAR38612, respectively) and KOL [IgG1 KOL] (AAR38606-07 and appropriate changes may be made. Unlike other methods of humanisation, which advocate the replacement of entire antibody framework regions with those of human antibodies, this method involves only the introduction of human residues into those positions not critical for antigen binding. This ensures that the binding properties of the modified antibody are not diminished. (Updated on 25-MAR-2003 to correct PN field.)

                  or AAMS8481), where AAWS84818 and AAWS8479 are humanised forms of the H65 light and heavy chain variable domains with low risk amino acid substitutions [i.e. low risk of reducing antigen-blading specificity.] and AAWS8480 and AAWS8481 are humanised forms of the H65 light and heavy chain variable domains with moderate risk amino acid substitutions and are present in humanised H65 antibody he3 (ATCC HB 11206). The method is useful for treating autoimmune diseases, especially systemic lupus erythematosus, rheumatoid arthritis, psoriasis or type I diabetes. The present sequence represents the murine MCPC antibody light chain variable
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    63

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Ig kappa chain V-J region (4B1 VL) - mouse (fragment)
C;Species: Mus musculus (house mouse)
C;Species: Mus musculus (house mouse)
C;Accession: S43103
R;Gilbert, D.; Brard, F.; Margaritte, C.; Delpech, A.; Tron, F.
Submitted to the RMB1 Data Library, March 1994
A;Description: An idiotype D23-bearing polyspecific, murine anti-DNA monoclonal antibody
A;Reference number: S42484
A;Accession: S43103
A;Status: preliminary
A;Molecule type: mRNA
A;Molecule type: mRNA

### November 2005

Published_Applications Nucleic Acid and Published_Applications Amino Acid database searches now generate two sets of results each. The Published_Applications databases have been split into two parts to reduce the amount of time required for their daily updates. This results in more machine time being available for processing searches.

Newly published applications will appear in the Published_Applications_New databases; older published applications make up the Published_Applications_Main databases.

Searches run against Nucleic Acid Published_Applications produce two sets of results, with the extensions <code>:rnpbm</code> (Published_Applications_NA_Main) and <code>.rnpbm</code> (Published_Applications_NA_New).

Searches run against Amino Acid Published_Applications produce two sets of results, with the extensions <code>.rapbm</code> (Published_Applications_AA_New).

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 5, A
